Highly Commended for Environmental Awareness

Company Registered in England No. 5255065 VAT No. 868030910

A Warm Welcome and Introduction to Absolute Environmental, from our Managing Director

I would like to take this opportunity to introduce ourselves; we are a family run Asbestos Removal and Demolition Company with over 18 years experience offering the following services.

- * Specialists in all types of Asbestos Removal, Re-insulation & Fabrication.
- * Asbestos Decontamination and Encapsulation
- * Specialist in Marine Asbestos removal & Marine Asbestos surveying.
- * Risk Assessments.
- * Bulk Sampling.
- * Asbestos Removal and Asbestos Surveying for Domestic and Commercial Properties.
- * Demolition.
- * Demolition Soft-strip.
- * Bird Fouling Eradication.
- * Industrial Cleaning.
- * Chemical Removal.

We are fully licensed by the Health & Safety Executive.
License No: **4061005108**

All of our staff are fully trained and have been working with us for a number of years. All our services are carried out in accordance with current legislation, in a professional and discreet manner.

We run a 24 hour emergency call out service along with free quotations and can perform works under your banner, should you require.

Please do not hesitate to contact us if you require any information, advice or call us for a complimentary HSE booklet. We look forward to receiving your call.

Yours Sincerely,

Ashley Jones

Mission Statement

We are a team of highly motivated managers and staff dedicated to providing the best services available in the industry. Our Strength is generated from our commitment to our clients, our industry, our employees and ourselves.

Absolute Environmental is committed to providing its clients with high quality services while creating an enjoyable and productive working environment. We are sensitive and responsive to our clients' needs and devoted to their satisfaction. We strive to be fair, honest, courteous and professional in all our dealings.

We acknowledge our responsibility to the communities where we work and to the environment. Absolute Environmental is committed to hiring and developing the best managers and staff available. We are dedicated to providing a working environment which allows every employee to gain job satisfaction whilst meeting the goals of the company to provide the highest quality service on a profitable basis. The safety of our staff, our clients, general public and the environment is an integral part of our daily activities.

Absolute Environmental is committed to excellence in every way, in our work ethic, in the services we provide, and in our relationship with our clients, employees, industry and communities

Asbestos Removal

Asbestos, a naturally occurring mineral, has been used extensively in some 500,000 buildings in the UK over the last few decades. Where removal is required, Absolute Environmental has the infrastructure and expertise to accommodate both small and large multi-million pound projects.

Absolute Environmental apply the most effective techniques for asbestos removal, supported by detailed method statements designed to ensure best practice at all times.

All projects are managed within industry legislation, approved codes of practice and HSE guidance notes. Rigorous audits ensure all quality control procedures are maintained by both internally and by external independent organisations.

Our quality assurance is recognised through the number of long term clients for whom we continue to serve. These range from the Public Sector (Education, Housing and Local Authorities) to private sector clients including some of the major contractors in the UK currently trading.

Absolute Environmental's approach to asbestos removal and disposal is designed to cause the minimum amount of inconvenience to the client. We work with clients on projects nationally, many of which are in challenging environments.

This includes working on buildings of significant architectural interest, working at height, where asbestos use has been extensive, and may pose additional risk due to its poor condition. We offer additional services to make-good following removal works where full refurbishment is not planned to take place.

Our commitment ensures we meet project requirements, from the early stages of negotiation right through to completion of a contract.

Asbestos Disposal

Due to the nature of asbestos, it is classified as hazardous waste and therefore specific and safe disposal is a core issue with any type of asbestos removal work. As such, asbestos disposal is a dangerous process and there are a number of safety, quality and legal requirements set out by the Environmental Agency that need to be met for any form of asbestos disposal.

Absolute Environmental have over 15 years experience in the removal and disposal of asbestos. Having put in place strict guidelines for all aspects of asbestos disposal we are able to offer the safest and best possible asbestos disposal service to our clients.

Absolute Environmental have a team of highly skilled asbestos experts that are able to assist with any asbestos related issues including complete solutions,

from an initial asbestos survey to full asbestos removal and subsequent asbestos disposal

We are proud to boast that our License for the removal of Asbestos is one of the few issued to companies recently that allows a three year operating period before reassessment, due to the high standards required by the HSE it is usual for companies to receive only yearly licensing.

Asbestos Surveys

Absolute Environmental offers guidance on all aspects of asbestos surveys and management to ensure clients are compliant with the many regulations currently in force.

Our surveyors offer a wide range of experience gained in the public and private sectors. All have completed extensive training to BOHS standards. This helps us to offer innovative, practical and cost-effective solutions to meet the increasing demands of those who manage property.

One of the key processes in managing asbestos effectively is to identify the type, condition, location and extent of asbestos containing materials. This can be achieved by producing an asbestos survey, of which there are two different types:

Management and Maintenance Asbestos Survey

Sampling, Identification and assessment survey

Sampling survey. Produces definitive results and is increasingly being adopted as the industry standard approach.

Demolition and Refurbishment Asbestos Survey

Full access / Intrusive sampling and identification survey. Pre-demolition / major refurbishment survey. More comprehensive, can be destructive and may need enabling works.

Our reports are produced in accordance with HSE Guidance note HSE 248 and are designed to be user friendly. An Executive Summary provides the main structure, linking to photographs, CAD generated floor plans, and results of samples taken. Recommendations made are cost effective, practical and relate directly to the current use of the premises.

Whatever the size or nature of the project, Absolute Environmental Management Services will produce appropriate solutions according to your needs.

Demolition

Absolute Environmental demolishes structures with the kind of precision and planning usually associated with their creation. Each project is handled by our team of experts, drawing on backgrounds in environmental remediation, engineering, dismantling, traditional demolition, material handling and the latest technology to guarantee complete predictability.

The experience that Absolute Environmental can offer is used to select precisely the best equipment, materials and methods for every project, and the best strategic communication plan to ensure acceptance by regulatory agencies.

In an industry where experience is everything, Absolute Environmental stands out for its pioneering vision, innovative spirit and years of experience.

If you are considering a site refurbishment, then Absolute Environmental can offer the complete service to cover stripping out, non-structural and structural demolition together with the removal and disposal of asbestos or similar hazardous materials

To ensure that many buildings, including those with listed status, are given a new lease of life we can assist developers with a bespoke propping system. This will enable us to gut the inside of the building leaving the outer skin. This will often add value to the site, both financially and visually, whilst keeping the character of the building, street and area intact.

THE

Thermal Insulation

Absolute Environmental provide a complete range of thermal insulation installation and protection for pipe work and fittings, vessels, boilers, ductwork and tanks in high or low temperature service.

Absolute Environmental contribute more than 20 years of first hand experience in the insulation industry. This fund of professional experience supports a high integrity of judgement in advising clients and in drawing up specifications to meet the requirements of low and high temperature or specialised insulation projects. In terms of both experience and manpower Absolute Environmental is large enough to handle sizeable contracts, yet also remains sufficiently compact to allow very close management control of labour and of projects to ensure that clients receive a consistently personal level of service.

With total independence of operation, Absolution Environmental is at liberty to advise impartially on the optimal choice of materials and finishes available from leading manufacturers - thus enabling best possible specifications to be drawn up in answer to customers' precise requirements. This freedom from constraint is of particular value in responding to the specific needs of specialised technologies such as those involved in food manufacturing and processing, or in controlled environment situations.

Within our client base, we have been able to provide an industrial insulation service dealing with the smallest and intricate of enquiries to large scale insulation projects. We pride ourselves on having a workforce that are both experienced in all fields of thermal insulation and are trained in health and safety practice and on the flexibility of our insulation installers working nationally throughout the UK on a regular basis.

Bird Foul Eradication

Bird Foul Eradication is a specialist service, which needs to be carried out with due diligence and care, whilst wearing the appropriate personal protective equipment.

At its worst, and on a large-scale bird foul is a hazardous material that needs to be handled properly and with care. Fouling should never be removed whilst dry or without the correct personal protective equipment. If it becomes airborne it can be inhaled by any person in close proximity to it and this can cause health problems.

Absolute Environmental will carry out an initial spray treatment of all fouling and associated debris with a specialist biocide treatment before moving any

fouling. The fouling infestation would then be removed via the appropriate means and disposed of to a suitable waste site.

The previously infested locations are then cleaned to an agreed standard and finally sprayed with a specialist residual biocide treatment to leave the area safe for access or further works. Accumulated bird fouling poses a serious health and safety hazard to occupants of buildings & premises.

Absolute Environmental operates nationwide, offering a local service to any customer with a bird problem. We will respond quickly to provide the appropriate solution in each case.

Industrial Clean

The portfolio of industrial services Absolute Environmental offer are designed to incorporate a range that can include the cleaning of a complete factory or production plant to one-off, on-site cleaning of a single tank.

These services can deliver the benefit of high performance and cost efficiency throughout the country.

Absolute Environmental is well placed to advise upon, design and manage such solutions. Our recent success shows our ability to meet customer requirements and forge long term partnerships. Flexibility in approach and versatility in design are key benefits when choosing a waste management partner.

A fully trained operating team work to the highest standards and in compliance with all relevant legislation. We ensure that the greatest care is taken to preserve surrounding areas and that your Duty of

Care under the Environmental Protection Act 1990 is met

We provide these services to local authorities, Utilities and Management Companies throughout the UK. Available 24 hours a day, 365 days a year, your maintenance requirements can be met in a professional and organised manner.

Whether it is a blockage or just a routine inspection we offer full systems support giving you cost effective compliance
